# Kisi Tailgating Detection

Protect your people, assets, and reputation: Detect and prevent unauthorized access.

Why tailgating detection?
- Enhanced security: Prevent unauthorized access and mitigate insider threats.
- Cost savings: Reduce risks of theft, vandalism, and data breaches, as well as the need for constant human oversight or expensive retroactive fixes.
- Ensured compliance: Meet regulatory standards and demonstrate proactive risk management.
- Operational efficiency: Reduce operational overhead and streamline investigations.
- Data-driven insights: Streamline attendance tracking, explore traffic analytics, and get real-time security alerts.

Interoperable security

Access control
- Ensure only authorized individuals gain entry with features like multi-factor authentication and mobile credentials.

AI-powered cameras
- Detect multiple people entering on a single credential and receive real-time alerts.

Smart sensors and barriers
- Implement motion detectors, turnstiles, and gates for improved intrusion detection.

Open platform with centralized management

All-in-one dashboard
- Manage all access points and monitor events from a single platform.

Global, remote management
- Manage all global users, places, and permissions from a single pane of glass.

Scalable, open, and future-proof
- Add new devices, users, locations, and apps without compromising system performance or security.

Alerts, insights, and analytics

Real-time alerts
- Receive immediate notifications for any tailgating attempts as a mobile push notification, via email, or on the Kisi web app.

Visual verification
- Get visual context for swift and informed security responses with Kisi's integrated video snapshots.

Data insights
- Analyze entry patterns and identify high-risk access points to refine security strategies.

45 Main Street,

Kisi Secure Vision

Kisi 9:41 AM
Tailgating was detected at the main office entrance of the Company HQ.

Anti-tailgating, anti-piggybacking / Anti-reverse tailgating (coming soon) / Mobile alerts / Account sharing prevention via primary device restriction / VMS (Video Management System) integration

Security tech you need to get started

Access control hardware
- Controller Pro (required)
- Access reader (nice to have)
- Credentials (nice to have)

Video security
- Any Cisco Meraki, VIVOTEK VORTEX or Lumana AI camera model that supports line crossing

Software
- Kisi One Security Platform

Proactive security for the modern workplace
