

Access meets enterprise

The integration allows you to create the ultimate security setup for your facility and streamline your onboarding.

Ultimate flexibility

Easy sharing

Admins can create teams that incorporate doors from multiple places, automate sharing with SCIM, or manually add a new member with one click.

Centralized billing

An Organization is billed for all of its Places in one invoice for simplification.

All-in-one security

Your users will use SSO to authenticate in the Kisi app. You will be able to access event logs of different locations through the same dashboard.

Designed for IT

Make security part of your IT stack

As a solution for IT and cyber security professionals, we prioritize integrability and automation potential. Our integrations portfolio is constantly expanding based on our customers' needs.

Future proof facility security

Kisi's devices update over-the-air with feature release and maintenance cycles occurring bi-weekly. Allowing your future workplace projects to use physical security data as input will be crucial.

Collaborate better with your team

Kisi makes it easy to assign different roles (e.g. for an office manager) with intuitive interfaces and clear permissions that make it easy to get started and hard to do something wrong.
