Kisi for resellers and managed service providers

KISI

In the current "new normal", managers are not always on site to supervise office security, onboard employees and make sure everything is in order. As a result, there is a requirement for new and improved tools to keep spaces running.

Outgrowing traditional systems

– Traditional access control systems require hosting on local servers which makes remote control challenging.

– Old security systems are difficult to set up, manage and maintain. Operation is often dependent on third-party contractors, which becomes a bottleneck.

– Managing doors and locations is usually a time-consuming and mundane activity.

Modern cloud experiences

The most important word in this case is "cloud". It might seem obvious to you but it is not for our competitors.

Cloud-based management means you don't have to worry about server purchases, installation and maintenance costs and scalability issues.

Think differently

Security

Kisi improves office security by storing access information in the cloud and making it accessible from every browser and device, so you won't have to be in the office to check why the door is being held open.

Automated alerts and remote monitoring ensure your space stays secure. Our open API grants the possibility to create seamless integrations with us, in case you aren't already. For further reading, please see integrations.

Kisi also supports and integrates with surveillance cameras, VMS, elevators and contact sensors for intrusion detection.

Management

Kisi lets Office Managers control the office space remotely using only a phone, laptop or tablet. Managers can also assign specific permissions to their teams to give them access to areas during certain time frames.

Normally, an IT Security expert has to manage and run your access control system. Our modern system is easy to use and does not require any local servers. And if you ever need help – our support team is available around the clock to assist you with anything related to the Kisi system.

Employees

Employees have the option to use a keycard, key fob, or their phone to gain access to the office. Inactive workers can easily have their access revoked to provide better security.

Why do MSPs prefer Kisi? Because we seamlessly integrate with everything in the current tech stack, making us the most flexible option out there. We provide demos so you can get to know how the product works and feels.

Built for your customers

Flexibility

Use in parallel with existing physical security offerings; video surveillance systems, alarm systems or other access control readers.

Scalability

We created a scalable solution that fits customers today and tomorrow.

Integrations

Increases cross-selling value by integrating with SSO, AD, Syslogs and RMM softwaret.

Management

The MSP support team can even manage access for the clients.

Support

Our MSP support team can remotely troubleshoot any issue you might encounter and resolve it through over-the-air updates, without needing an installer.

Packages

Provides opportunity for new product bundles, e.g., "prop tech" packages.
