## Full or hybrid Kisi

## Access the complete feature set from Kisi

### Benefits

- Access all the features from Kisi's award-winning mobile 'Tap to Unlock' technology, to MotionSense, and enjoy end-to-end security for an entire organization.
- To get from a legacy setup to a native Kisi setup, Kisi offers a two-wire adapter to bridge Power over Ethernet over legacy two-wire cabling without incurring high cost.

### How it works

- Replace legacy hardware with Kisi's Controller Pro 2 and Reader Pro 2.
- Configure the Kisi web app within seconds.
- Connect people and spaces your way.

# Mobile overlay

# Enable Kisi mobile unlocks on top of your existing solution

## Benefits

- Maintain your existing system and functionality, and utilize Kisi as an additional input for mobile unlocks.
- Kisi will serve as the system of record for mobile credentials, while preserving the functionality of legacy readers.

## How it works

- Connect your legacy controller to the Kisi Controller Pro 2's Wiegand board.
- The legacy controller will interpret Kisi in-app unlocks as a credential swipe at the door.
- Securely store user-specific logs in the Kisi audit log.

## Mobile & physical credentials overlay

## Enable mobile and card unlocks with Kisi on top of your existing solution

### Benefits

- Maintain your legacy controllers and readers, while enabling both mobile tap in-app and card unlocks with Kisi.
- Use Kisi as a shared or sole system of record for legacy credentials.

### How it works

- Connect the Kisi Controller Pro 2's Wiegand board to your legacy controller.
- For a shared system of record, wire legacy readers to both legacy and Kisi controller. Access is granted if either controller authorizes credential. Ideal for a smooth credential migration to Kisi.
- For a sole system of record, wire the legacy reader to the Kisi controller, which handles authorization. Perfect for having control over access authorizations without relying on the legacy controller.
