

Installing Kisi with a prior system

Replacing your old access system with Kisi is incredibly easy and most deployments can be done on a short turnaround. Below you will find some of the common components you can keep when migrating to Kisi.

Scenario

Building or elevator

Office/facility

Common use-case

For building access systems that should not be changed.

For companies who are looking to move to a modern system keeping replacements to a minimum.

Solution

Users will be able to unlock the door with Kisi's mobile App - the existing system works as usual.

Users will badge in with Kisi's reader and locks are controlled by Kisi's controller.
