

# Kisi elevator access

A smarter way to manage your elevators

## Secure your floors with Kisi

- Share access to specific floors in your building
- Set up time and user restrictions
- Enable smartphone credentials
- Manage all entry points and locations from one dashboard

Kisi works with relay-based and dispatch-based elevators

### *Relay-based elevators*

In relay-based elevators users select their floor inside the elevator cabin.

### *How it works with Kisi*

A Kisi Reader, installed inside the elevator cabin with wired internet connection, allows a user to present their phone or keycard to the reader and press the floor button they're authenticated to access. This solution allows admins to control access to Kisi-enabled floors.

### *Dispatch-based elevators*

In dispatch-based elevators users select their floor outside of the elevator cabin on a dispatch screen affixed at the entrance.

### *How it works with Kisi*

You can install Kisi on dispatch-based elevators using the Braxos integration. If you are looking for a dispatch-based elevator solution, please speak with our sales team.
