

Kisi remotely manages door access, safeguarding your facility.

Reduce risks from touching common areas

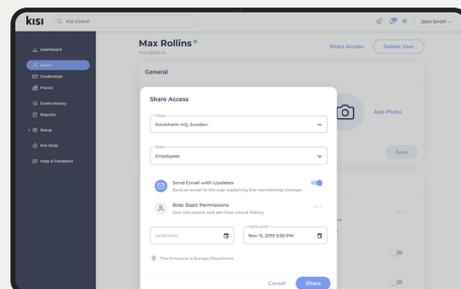

Touchless unlock

With hands free technology there is no need for your hands to touch common touch points such as the access reader, elevator button, or the door, in order to unlock them.

Remote unlock

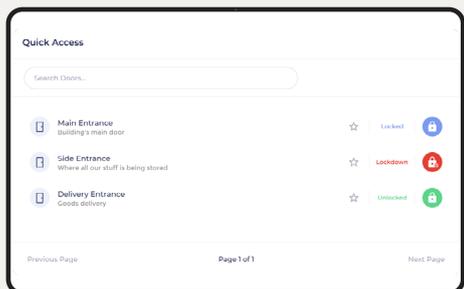

Authorized users can remotely unlock access areas from their web-accessible dashboard or mobile App.

Remote access charing

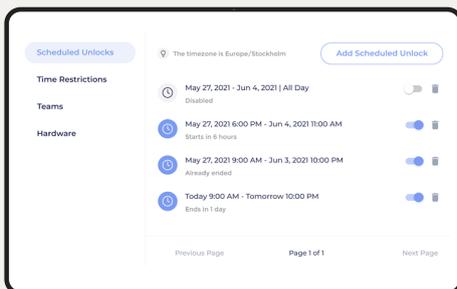

Administrators can instantly share or delete mobile credentials and generate guest entry links for self-service onboarding.

Stay in control remotely

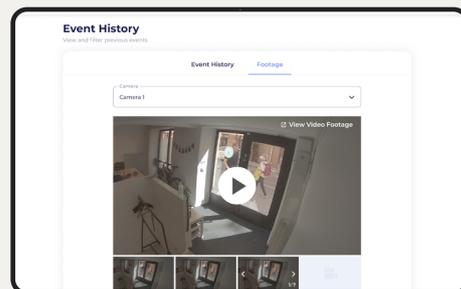

Remote lockdown

Immediately lock, or unlock, any designated doors from a remote device.

Changing opening hours and schedule

Instantly change access hour permissions or door schedules to allow users to come at different times.

Visual access events audit

Review and visually confirm recent access events via Kisi's cloud camera integrations.
