# All-in-one door access & video surveillance

Kisi integrates with video surveillance cameras to provide visual snapshots that enhance the audit trail for admins – directly on their Kisi dashboard.

Companies can use the video functionality to verify access control logs for auditing and investigations. Cisco Meraki and Rhombus cameras are supported out-of-the-box.

Purpose of integrating Kisi with video surveillance systems

Admins can review unlock events and receive visual snapshots of which user actually went through the door at the time of an unlock event—without searching for video footage. The camera integration provides snapshots before and after unlock, forced-entry, or held-open door events.

Benefits

- Enforce the proper use of credentials
- Investigate tailgating situations
- Easy setup from the Kisi dashboard
- Enable real-time intrusion alerts for held-open and forced-open door events
- Avoid having to switch between access control and video system activity logs

- Streamline activity logs and audits with visual snapshots
- Provide additional context for security-related events
- Visual feedback to enable administrators to resolve issues
- Administrators can assign/deassign cameras to/from doors
- Enable your staff to quickly validate door entry events
